Python loops
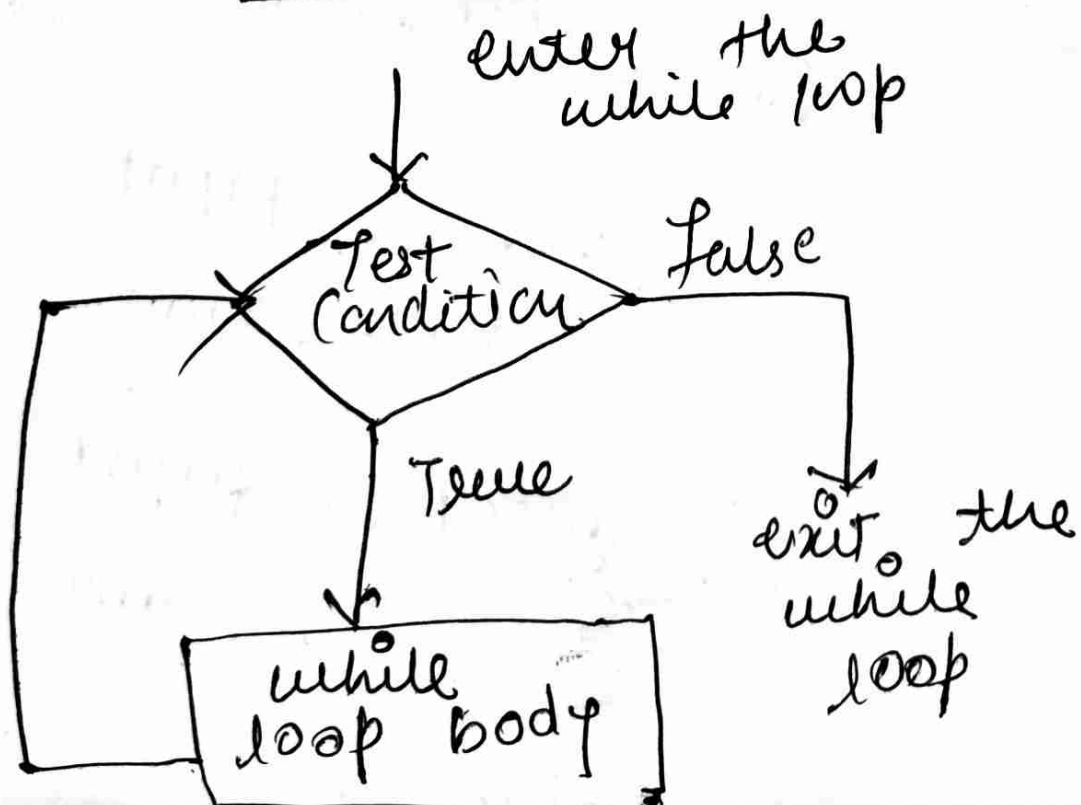

↳ while
↳ for

. loop is repeatation of same kind of work.

we have two kinds of loops in Python.

while loop

enter the while loop

Test Condition → False

True

while loop body

exit the while loop

initialize value
loop condition
updating value. }

Program:-

i = 1   # initialize
while i <= 6:   # loop condition
    # inside body
    Print (" You are best ")
    # updating value
        i += 1   # i = i + 1

output:- Print You are best
            6 times.
